At this time, Adobe bought Macromedia . This then meant that the two companies had to work together to put Photoshop online. Adobe also had to adapt Photoshop to be available as a web application. In order for it to work the Adobe team had to make small changes to the program. These changes were simple and included things like showing the image similar to what Photoshop would have shown in download mode. Adobe also offered a new tab that allowed you to access your files from any location by introducing a tab called "File". This was the first time that a person was able to upload files from a computer to online. They were also able to watch files as they were being uploaded in real time. This would have been nearly impossible to do when working in the Adobe program. For the first time, users were able to upload files to a website and they were actually able to view it as it was being uploaded. To import an image into Photoshop, do the following:

- Open the file from any location on your computer.
- Select Tools/Import (Or Photoshop CC 2017: File/Import).
- Select the option to open the file, choose any location on your computer, and select Save.
- Once the file has been imported into Photoshop, you can use any of the handy features of Photoshop. For instance, if you want to see a magnified detail of how something was inserted into your file, all you have to do is select the eyeball icon on the Layers panel.
